

Final Project: Self Evaluation Statement

STAT 158

Clara Reckhorn

For our final project, I feel that my group (group 10) did a fair job of distributing the work. I was responsible for most of the coding (ANOVA table, MC estimate of power, plotting power curves) and transforming the raw data into a format that I could work with. I was also responsible for formatting the report into a quarto-style research report, as well as the AI statement, and the significant changes made after protocol section.

Jocelyne was responsible for the interaction plots part of the code. She also wrote the discussion and conclusion.

Gabriella was responsible for writing the introduction, methodology, and the results sections.

I am satisfied with our work and how it was split up.
